

June 24, 2016 – Boston, MA

Have you wondered what evidence-based design (EBD) is and why it's important? Or are you EDAC-certified and planning or designing a project and want to use the EBD process? If so, attend this in-depth workshop to learn directly from industry experts. This workshop is designed to provide an introduction to EBD to help you understand how to integrate EBD concepts into your work and put them into practice. Consider attending as a team and learn how to integrate the EBD process together.

Healthcare organizations today are faced with increased transparency surrounding patient-safety and quality issues, declining reimbursement, the shift from volume to value, and the need to bend the cost curve as provisions from the Patient Protection and Affordable Care Act take effect. Learn more about these issues and how the built environment can bring solutions. This day will prepare you to be a better partner by providing you with the knowledge and tools to address the challenges facing healthcare today.

Once you register for this workshop, The Center for Health Design will contact you to complete a questionnaire prior to attending the workshop. Each attendee receives a bundle of EBD books and resources from The Center for Health Design (\$200 retail value).

To register visit: www.healthdesign.org/events/43

WHO SHOULD ATTEND

- Healthcare architects, designers, and consultants
- Hospital executives
- Healthcare providers
- Engineering and construction professionals
- Product manufacturers
